SUMMARY

Cyber Security graduate and INE eJPT certified professional specializing in offensive security. Highly skilled in vulnerability assessment, web stress testing, and exploitation tools. Proficient in utilizing the Linux CLI for comprehensive network enumeration and leveraging scripting (Bash/Python) to streamline security workflows. Actively honing advanced offensive skills through structured penetration testing labs on Hack The Box and VulnHub.

TECHNICAL SKILLS

- **Offensive Tools:** Metasploit Framework, Burp Suite, Nmap, Aircrack-ng Suite, Nikto, Dirb, Enum4linux, Hydra.
- **Scripting & Automation:** Bash/Zsh scripting, Python, k6 (JavaScript-based) for automated load testing.
- **Operating Systems:** Linux CLI proficiency (Kali / Ubuntu), Windows.

PENETRATION TESTING & SECURITY PROJECTS

Wireless Network Attack Simulation (Man-in-the-Middle)

- Executed a full kill-chain wireless attack, utilizing client deauthentication techniques and hosting a Rogue Access Point to successfully intercept victim traffic via iptables.
- Deployed a custom captive portal to harvest user credentials in real-time, securely capturing and storing them in an underlying SQL database.

Physical Penetration Testing Tools (Hardware Exploitation)

- Configured a Bluetooth Human Interface Device (HID) utilizing an ESP32 microcontroller to execute rapid, automated payload delivery, bypassing standard physical endpoint security controls.

Penetration Testing Labs (HTB & VulnHub)

- **Enumeration:** Utilized Nmap, Nikto, and Enum4linux to identify unpatched services, open ports, and OS versions across varied Linux and Windows targets.
- **Exploitation:** Successfully rooted target machines (e.g., Kioptrix, HTB: Blue) by weaponizing public exploits and leveraging manual enumeration techniques to identify privilege escalation vectors.

Enterprise Security Policy Development

- Drafted a mock corporate security policy for Honda, emphasizing threat mitigation, defensive countermeasures, and physical access controls from an attacker's perspective.

Web Server Exploitation Lab (In Progress)

- Configuring a dedicated Linux web server on legacy hardware to host intentionally vulnerable applications for custom exploit development and web application penetration testing.

RELEVANT COURSEWORK

Ethical Hacking | Linux and Windows Administration | Cyber Security | IT Support | Business Continuity

EDUCATION & CERTIFICATIONS

Ivy Tech Community College, Columbus, IN
Associate of Applied Science in Cyber Security

July 2025

GPA: 3.0

- **Certifications:** INE eJPT (Mar 2026), CompTIA Security+ (Aug 2025)
